THE OPERATORS SIDE OF THE GREAT COAL STRIKE

BY JOHN MARBLE

"THE VOICE OF LABOR" BY JOHN MITCHELL, PRESIDENT OF THE UNITED MINES WORKERS GIVES THE "IVORY TOWER" SIDE OF THE CONTROVERSY, WAS PUBLISHED IN COLLENS WEEKLY'S SEPTEMBER 6

FOR THF general public to obtain a thorough understand of the operatons of the coal operators is at the heart of the controversy. The Big Three, the operators, are the central figures in the dispute. They are the ones who make the decisions that affect the lives of the miners and the families they support. They are the ones who control the resources that sustain the communities they live in. They are the ones who wield the power that determines the future of the industry.

In 1909 the coal operators found it necessary to enact their own code of conduct in order to protect their interests. This code, known as the "Ivory Tower Code," was designed to ensure the stability of the industry and to prevent strikes. It was a code that was enforced by the operators themselves, and it was strict. They had to follow this code at all times, and they had to follow it strictly.

The results were clear. The operators found that they could no longer operate the mines in the same way as before. They had to be more careful, more thoughtful, more responsible. They had to be more mindful of the safety of the miners. They had to be more careful with the coal. They had to be more careful with the workers. They had to be more careful with the community. They had to be more careful with the environment. They had to be more careful with the future.

In this context, it is easy to see why the operators found it necessary to enact their own code of conduct. They had to protect their interests in order to ensure the stability of the industry. They had to protect the safety of the miners in order to ensure the health and well-being of the families they support. They had to protect the environment in order to ensure the sustainability of the industry. They had to protect the community in order to ensure the safety and prosperity of the families they live in.

The operators found that they could no longer operate the mines in the same way as before. They had to be more careful, more thoughtful, more responsible. They had to be more mindful of the safety of the miners. They had to be more careful with the coal. They had to be more careful with the workers. They had to be more careful with the community. They had to be more careful with the environment. They had to be more careful with the future.

THE GREAT COAL STRIKE

Few people know just how useful it is in preserving health and beauty.

Charcoal is a remedy that the more you know of it, the more you like it; it is not a drug at all. All you know of it is that it is valuable in the treatment of many diseases and ailments.
